Classic Series P-8 PRO C 20A Rackmount Power Conditioner

⚡ 120 Volts

Engineered for the most demanding, high-current applications, the Furman P-8 PRO C is a rugged and reliable 20A rackmount power conditioner. Its defining feature is a high in-rush 20 Amp magnetic circuit breaker designed to handle the heavy loads of power amplifiers and other high-draw equipment. Housed in a road-worthy steel chassis, it provides comprehensive protection with Furman's SMP+, LiFT, and EVS technologies. While it forgoes front lights, it includes a rear-panel BNC lamp connector for targeted rear-rack illumination, making it the workhorse choice for professional touring rigs and installations.

Applications

INSTRUMENT RIGS

You've got a rack for your effects, preamps, tuner... You're going to plug that into the wall? One big spike and your rig is up in smoke. The advanced Series Multi-Stage Protection from Furman defends your gear from the spikes and surges that are so common at gigs and practice spots. With advanced Linear Filtering Technology from Furman, you'll get a quieter tone without pops, crackles, and the local radio station coming out of your amp.

RECORDING

Can't track down where that noise is coming from? Your mix sounding flat? With advanced Linear Filtering Technology from Furman, you'll lower the noise floor caused by the dirty AC power coming into your console or DAW. Advanced Series Multi-Stage Protection from Furman keeps your sensitive digital equipment from acting funny or burning up due to everyday spikes and surges. With a 15A capacity and eleven total outlets, it's enough to power your whole home studio.

DJ EQUIPMENT

Bars, clubs, and other event venues have some of the worst power out there—from air compressors turning on and off to light shows pulling current loads up and down, the AC power can strain the circuits in your rig. Advanced Series Multi-Stage Protection and LiFT from Furman keep the bad stuff out, and the dual pull-out front panel lights let you discreetly see your board and gear without distracting from the show on the dance floor.

PRO AUDIO

When you're out there gigging, you never know what kind of power you're going to get. The wear and tear on mobile rigs eventually takes its toll—that's why it's smart to plug into advanced Linear Filtering Technology from Furman. It keeps your equipment safe and sounding clean. Whether you're setting up a show at the local club or powering up the church band for their next service, make sure you give them power they can trust.

SPECIAL FEATURES

EXPLORE P-8 PRO C POWER CONDITIONER

SMP+ with extreme
voltage shutdown

LiFT (Linear Filtering
Technology) with zero
ground contamination

Eight rear panel outlets
and one front panel outlet

BNC connector on the rear
